

Benjamin Gearig

Knoxville, TN · contact@bengearig.com · 248-238-6875

Summary

Software engineer with 15+ years of experience shipping production systems from embedded safety devices and fraud detection to payment services and LLM-based automation. Equally at home in Go, Python, or embedded C, and across the stack from firmware to the cloud.

Proficiencies

Go · Python · Embedded C · Vue · PostgreSQL · Docker · Kubernetes · GCP · Terraform

Experience

Full Stack Software Developer at AAA The Auto Club Group (ACG Labs)

May 2023 – Current

- Developed a fraud detection system that verifies trailing document authenticity, saving the company millions of dollars in the first year alone
- Built a mobile-first payment service for handling millions in quick and convenient transactions at the roadside, safely and securely from the customer's own device
- Engineered a platform that automates the Software Development Life Cycle from design and development to testing and deployment using design session transcripts and Human in the Loop feedback gates
- Designed an imminent-collision-detection algorithm that is embedded in life-saving roadside safety devices being piloted across the country

Software Engineer and Consultant at Gearig Software and Consulting

October 2013 – May 2023

- Devised a novel bin-packing algorithm and reverse-engineered shipping-rate APIs to provide the most efficient and cheapest solutions for boxing products in a warehouse fulfillment setting
- Implemented a path-finding system that cut warehouse pickers' travel time by 4+ hours per week and reduced fatigue
- Created custom printer drivers and a battery-backed, distributed printing system that ensured correct media type usage, device failover, power-outage resilience, and empty media management
